Technico, Inc. is an established Sales and Distribution Organization, offering factory automation and motion control products and services required for industrial automation applications. Our company offers a complete sales and support staff to assist customers with all of their factory automation and motion control needs. Our primary sales efforts target mechanical and electrical design engineers, as well as purchasing and maintenance personnel.

Incorporated in 1986, our staff consists of Outside Sales, Engineering and Administrative Services, Inside Sales and Machining specialists. Technico also has warehouse and machine shop that provide inventory, shipping, receiving, assembly and machining services on site. Technico owns and occupies a 10,000 sq. ft. building, 8,000 of which is warehouse and machine shop space.

We specialize in offering a broad range of factory automation and motion control products to OEMs in a wide variety of industries. Primary industrial applications include machine tool, metalworking, automotive, automation, transfer equipment, glass, robotics, tire and rubber, medical, injection molding, pick and place, press, steel mill equipment, packaging, and special machinery, among others.

We also have an established presence with large and small end user accounts, including automotive assembly plants, steel mills, stamping facilities, light and lamp plants, and a host of other factory automation industrial users.

Please feel free to contact a member of our sales staff with any questions or comments or to learn more about the motion control products we supply.

We look forward to doing business with you!

Authorized Distributor

THK offers the world's most complete line of Linear Motion Systems and products for your Motion Control and Automation needs. These systems include Linear Motion Slides, Ball Screws, Ball Splines, Linear Actuators and Stages, as well as other linear motion products.

Linear Motion. Optimized.

Thomson Industries manufactures the broadest standard product offerings including Industrial Ball Screws, Ball Screw End Supports, Linear Guides and Components, Linear Systems, Positioning Slides, Industrial and Precision Linear Actuators, Lead Screws, Gearheads, Brakes & Clutches, Precision Balls and Linear Slides

eShaft Case 60 is engineered round linear shafting, manufactured to extremely close industry tolerances on diameter, straightness, and roundness. Designed for use in all Motion Control applications and engineered to exacting standards.

Technico Design and Machine includes Machining Services, Application Engineering, and custom Mechanical and Electro-Mechanical Motion Control solutions to support our customers in the Motion Control and Automation Industries.

Nanotec Electronic supplies drive solutions based on high performance stepper motors, BLDC motors, linear actuators, and innovative motor controllers. Years of experience are reflected in high performance, energy-saving solutions including the Plug & Drive motors, integrated motor controllers, and other products for your motion control prices

AirTAC specializes in producing Pneumatic Products - Cylinders and Valves. Fittings, Control Components, Preparation Units, Actuators and Linear Guides. With over 8500 employees and close to a billion dollars in sales, AirTAC is a leader in the industry.

R+W Coupling Technology manufactures couplings for the Power Transmission and Motion Control Industries. Coupling products include Metal Bellows, Safety, Miniature, Economy, Line Shaft, Elastomer, and Linear. Most products are available quickly.

ROLLON is a leading manufacturer of linear motion systems, guides and linear actuators that are designed to meet the requirements of engineers involved in machine design applications in the primary fields of industrial automation and robotics.

Nabell USA Corporation is a manufacturer of bellows and protective covers for a variety of applications, including medical equipment, machine tools (ball screw, linear way, linear guide, telescopic waycover, laser, water jet), precision instruments, camera & optical, clean room applications, and materials handling.

Zimmer clamping and braking elements routinely perform critical positioning, holding and braking tasks. They ensure precision during cutting processes and boost efficiency with short cycle times. Their secure hold maximizes safety and protects the machines.
